

Anjuna Bay Rentals — where the results leak, and how to stop it

A public-data investigation of how the Anjuna rental villas at Thomas Beach are sold: live inventory, pricing vs market, distribution, demand generation and guest communications. Seven research dimensions; the four root-cause hypotheses were adversarially verified. Every figure is sourced; estimates are labelled.

Date: **12 July 2026** Scope: **public data only** Method: **7 dimensions + adversarial verification**

Current operator: **Balinest Villas (Guesty)**

◀ Theme

THE VERDICT AT A GLANCE

The villas that are on the market book well. Most of the estate isn't on the market.

UNITS LIVE FOR RENT

≈ **10–15**

of ~69 planned. Found publicly across Airbnb, Booking, Agoda, Trip, Marriott & the direct site; most of the estate is still off-plan/unbuilt. Exact live count to confirm on the host profile.

NIGHTLY RATE

\$144

Real 2BR lead-in (non-refundable) vs Uluwatu median ~\$216 · 33–44% below segment

OWNED DEMAND

≈ **0**

All marketing targets property buyers or villa owners; guest demand is rented from OTA algorithms

GUEST SCORES

4.87–5.0★

Booking 8.7/10, Staff 9.5 · Guest-favorite + Superhost — hospitality is not the problem

WHAT IS GENUINELY WORKING

Credit where due

The on-ground team earns its scores: Booking guests rate Staff **9.5/10**, a named contact ("Budi") sends a welcome WhatsApp the day before arrival, and reviews call the team "responsive" and "available 24/7" — with zero indexed complaints about unreachability. Cleanliness, design and the new build are consistently praised. The channel base is modern too: one Guesty backend feeding Airbnb, Booking, Agoda, Trip.com/Ctrip and Marriott Homes & Villas. **This audit is not about weak hospitality — hospitality is the strongest asset. It is about the commercial layer: inventory, pricing, brand and distribution.**

THE LEAK MAP — ADVERSARIALLY VERIFIED

Why bookings are few: seven leaks, ranked

1 Inventory cap — the root cause **CONFIRMED (directional)**

Only ~10–15 identifiable villas surface publicly across all channels (A3, B1, B2, B3, B10, 2A1, 2A5, A14, A15...) — a search-based count worth confirming on the host's own profile. The bigger fact is firmer: most of the ~69 planned units are still off-plan — Aurora (32) is made-to-order, Palms (15 townhouses, due Jun 2026) has **no rental presence anywhere**, Urbana (22) completes Dec 2026. Whatever the exact live number, bookable inventory is a fraction of the estate — so booking volume is structurally capped.

Evidence: listing census across Airbnb/Booking/Agoda/Trip/Marriott/Guesty (public search index) · FazWaz & asia.villas completion statuses. Exact live-unit count pending a host-profile check.

2 Rate leakage **VERIFIED-PLAUSIBLE**

The \$144 2BR lead-in is a real (non-refundable) rate; 1BRs show from \$66. That is 33–44% below segment medians despite 4.87–5.0★ quality. Even at 85% occupancy this earns ~\$122 per available night — mere parity with the *average* Uluwatu listing (\$130 RevPAR). Estimated foregone revenue: ~\$9–35k gross per month across the ~10 listed units.

Evidence: Booking/Agoda rate snippets · airroi Uluwatu: median \$216, 2–3BR ADR ~\$259, top-25% \$313+ · no dynamic-pricing tooling traceable

3 No demand engine **VERIFIED-PLAUSIBLE**

Guest demand is rented, not generated. @anjabay markets real-estate sales; the operator's own channels target villa *owners*, not guests — and its site copy tells guests to "book through Airbnb for the best rates". No Google Business profile, no rental ads found, SEO ≈ 5 indexed pages. New listings start from zero with nothing pushing demand to them.

Evidence: IG bios & content review · site index census · Ad Library probes (403-limited)

4 Fragmented review equity **VERIFIED-PLAUSIBLE**

Social proof is split across 12+ separate listings, so most units present as "new — 4–13 reviews" while B1 alone holds 86. The flagship Booking listing scores 8.7 — below the "Wonderful 9+" filter quality-conscious guests apply. Every newly-added unit relaunches from zero.

Evidence: per-listing review census (B1 86 · A14 44 · 2BR 6 · Booking aggregate 59)

5 Thin, inconsistent distribution

Five channels only — and 5 of the 9 live units sit on exactly one channel each (B10 only on Booking, B3 only on Agoda, A14/A15/B1 only on Airbnb). Absent entirely: Vrbo/Expedia, TripAdvisor, Google Vacation Rentals, metasearch, luxury agencies, retreat platforms. The direct site has one Anjuna property indexed. The "Anjuna" name itself leaks brand searches to Anjuna, Goa (India).

Evidence: per-channel listing census · site: searches across 12 platforms

6 Listings that undersell

Unit codes ("Anjuna B10", "2A5") mean nothing to guests; near-identical titles cause choice paralysis; a live title typo and an Agoda URL/unit mismatch signal sloppy channel management; templated copy never pre-empts the noise objection — while reviews report a rock-breaker "all day, every day" and a nightclub until 3–4am, undisclosed.

Evidence: listing titles/snippets · Booking review texts (construction + Tabu club)

7 Owner flies blind

No public SLA, no management replies to reviews, no evidence of funnel-level owner reporting (live inventory → inquiries → response times → conversion → ADR vs market). When results are a black box, "few bookings" is a feeling with no lever attached.

Observation: no owner-reporting artefacts found · booking email is a Gmail address

BEFORE / AFTER

The same villas, run differently

TODAY

~9 units live; completed villas sit unlisted;
Palms townhouses absent from every channel

5 of 9 units on **one channel each**; no
Vrbo/Expedia/TripAdvisor/metasearch/luxury
agencies

Demand bought with **below-median rates**
(\$144 lead-in); no dynamic pricing traceable

RUN COMMERCIALY

**Every completed unit listed on every major
channel**; Palms onboarded on handover day

Daily revenue management; 2BR repositioned
to **\$210–300** with a guarded ladder

Guest-facing **Anjuna Bay brand**: landmark
titles, Google profile, book-direct incentive

Marketing spends on **buyers & villa owners**, not guests; site sends guests to Airbnb

Reviews split across 12+ listings — most units look "new"; noise objection unmanaged

Owner sees outcomes, not the funnel

Review equity consolidated; construction/noise disclosed and mitigated — ratings protected

One intake over every channel — approved first reply < 2 min, 24/7, qualified + followed up

Owner gets a **weekly funnel report**: live inventory, inquiries, response times, conversion, ADR vs market

REVENUE PER AVAILABLE NIGHT — 2BR, ESTIMATE

Today: $\$144 \times \sim 85\% \text{ occ}$		≈ \$122
Median rate: $\$216 \times 70\% \text{ occ}$		≈ \$151
Market 2BR: $\$259 \times 62\% \text{ occ}$		≈ \$161

*Estimates from public benchmarks (airroi Uluwatu; verified rate snippets). Today's ~\$122 merely matches the average Uluwatu listing's RevPAR (~\$130) despite top-tier reviews. Estimated foregone: ~\$880–1,190/mo per 2BR conservatively, up to ~\$3.5k vs quality-matched top-quartile — ~\$9–35k/mo across the ~10 listed units, before counting the unlisted inventory and before direct-booking savings. A nearby benchmark on the same Guesty stack (Lago Villas, Bingin, by Cabo Bali) runs 92% occupancy at **+48% RevPAR vs market** with a per-villa brand and daily revenue management.*

WHAT TO DO DIFFERENTLY

Seven moves, in order of impact

1. **Put the inventory on the market.** List every completed unit on every major channel and onboard Palms the day it hands over. This is the only move that multiplies the *number* of bookings — everything else improves their value.
2. **Install daily revenue management** and reposition the 2BR at \$210–300 with a guarded ladder; make the hook rate refundable; fix rate parity so direct is genuinely best.
3. **Build the guest-facing Anjuna Bay brand** — landmark listing titles instead of unit codes, Google Business profile + review flow, guest content split from the sales brand, book-direct incentive.
4. **Consolidate review equity** — restructure listings so social proof transfers to new units instead of every unit relaunching from zero.

5. **Widen distribution** — Vrbo/Expedia, TripAdvisor, Google Vacation Rentals, metasearch, luxury agencies, retreat/group platforms; put every unit on every channel.
6. **Manage the noise objection honestly** — disclose construction phase and nightlife in listing copy, mitigate on-site — protecting the 4.9★ asset through 2026.
7. **Unify first response + owner visibility** — one AI layer over all channels (approved answers < 2 minutes, 24/7, qualification, D1/D3/D7 follow-up, human escalation) and a weekly owner funnel report. Results become numbers, not feelings.

Keep what works: the on-ground service team and standards (Staff 9.5), the Guesty stack and existing channel accounts, the welcome-WhatsApp ritual — and change the commercial layer around them without disrupting guests.

IMPLEMENTATION

14 days to live

DAYS	WORK	OUTPUT
1–2	Access + knowledge base: approved answers, villa facts, tone, escalation rules	Approved KB v1
3–5	Channel unification: WhatsApp/direct + OTA inbox coverage, first-reply flows	<2-min first response live
6–8	Qualification + upsell flows, quiet-lead follow-up D1/D3/D7	Qualification live
9–10	Owner report: weekly funnel + response times + ADR vs market	Report v1 delivered
11–13	40-scenario acceptance suite (availability, unknown pricing, complaint, VIP, pause-AI)	Acceptance pass
14	Go-live + handover + pause/rollback procedure	Live, documented

KPIS WE COMMIT TO

- ≥95% of eligible inquiries on covered channels answered **< 2 minutes** with approved content
- 100% of inquiries logged with qualification fields
- D1/D3/D7 follow-up on every quiet lead
- Human escalation < 15 minutes for flagged cases

HONEST LIMITATIONS

- No guarantees of occupancy, revenue, ADR or review scores — pricing and hospitality decisions stay with the owner/operator
- Public-data findings are search-index-based; the Secret Guest Audit is one test — a signal, not proof
- Seasonality, construction, nightlife noise and OTA algorithms are outside our control

- Owner report delivered every Monday

- Per-channel coverage is confirmed during days 3–5 (OTA API access varies)

NEXT STEP — FREE, 48 HOURS

See it measured, then decide

Option A: a free **Secret Guest Audit** — one respectful test inquiry through your public flow, with a timed report (auto-reply vs human, qualification, follow-up, tone).

Option B: a 20-minute demo — a live inquiry answered and qualified in under 2 minutes, plus a sample owner report.
