

SELENA SYSTEMS · BALI · JULY 2026

Anjuna Surf & Sunset Villas

Full Analysis & Go-To-Market Strategy

Why bookings underperform · the competitive field · what Uluwatu guests actually want · the corrected commercial plan (GTM v2, adversarially reviewed) · takeover due diligence

Public data only · estimates labelled · independent — not affiliated with Anjuna Bay or Balinest Villas

The assignment

- **The property** — Anjuna Surf & Sunset Villas — brand-new cliffside pool villas at Thomas Beach, Uluwatu (Pecatu). Part of the ~69-unit Anjuna Bay estate (Aurora 32 · Palms 15 · Urbana 22).
- **The situation** — Villas are rented through the current operator, Balinest Villas (~207-listing manager, Guesty stack). The owner is dissatisfied: too few bookings, too little money.
- **The question** — How does the current operator sell? What works, what fails, why are bookings few — and what should a new management setup do differently?
- **Candidate operator** — Fadjri D. Roesman, cSMH — 30+ yrs hotel leadership (GM Lombok Astoria; ex-Westin Nusa Dua, Le Méridien, Mandarin Oriental, The Sultan).
- **This deck** — Everything found, verified, corrected — and the plan.

How we worked — and the honesty rules

- **Public data only** — OTA listings, analytics tools (airbtics/AirROI), project portals, forums — the owner's internal numbers stay in due diligence.
- **Hard limit, stated** — Bali OTA/analytics sites 403-block robots; figures come from search-index snippets. Every number carries a source tag; estimates are labelled.
- **Adversarial verification** — Root-cause hypotheses were attacked by independent verifier agents before we kept them (CONFIRMED / PLAUSIBLE / REFUTED).
- **Self-review** — The strategy itself was re-audited by two independent reviewer roles (performance marketing + revenue/CFO) — 30 findings, all critical fixes applied. The mistakes are shown in this deck, not hidden.
- **One test = a signal** — Never proof. Occupancy claims remain unverified until the Guesty data room opens.

Snapshot: what exists vs what is on the market

Cluster	Units planned	Status (Jul 2026)	Listed for rent
Surf & Sunset (operating)	~25 villas (est. from unit codes)	Built, operating	~10-15 found live (A3, B1, B2, B3, B10, 2A1, 2A5, A14, A15 + aggregates)
Anjuna Aurora	32 villas	Made-to-order / off-plan	0
Anjuna Palms	15 townhouses	Due Jun 2026 — handover unverified	0 — no rental presence anywhere
Anjuna Urbana + pipeline	22 apartments (+38 units)	Dec 2026+	0

Bookable inventory is a fraction of the estate. Even inside the finished cluster, completed villas appear unlisted — but many units are investor-owned: listing them requires handover, furnishing, a pondok wisata license and a signed owner mandate (verified in Week 0 of the plan).

THE VERDICT

A top-tier product trapped in a bottom-tier commercial wrapper.

Guests rate the villas 4.87–5.0 stars and praise the staff (Booking Staff 9.5). But most of the estate isn't on the market, the nights that sell are priced 33–44% below the segment, no one generates demand outside the OTA algorithms, and the listings sell unit codes instead of benefits.

DIAGNOSIS

Why bookings are few — four root causes, adversarially verified

#	Root cause	Verdict	Evidence
1	Inventory cap — only ~10-15 of ~69 units are listed; most pipeline unbuilt; completed villas sit unlisted	CONFIRMED	Channel census across 6 platforms; FazWaz/asia.villas statuses
2	Rate leakage — 2BR \$144 non-refundable vs market median \$216 / avg \$267; RevPAR $\approx$ market average despite 5-star reviews	PLAUSIBLE (strong)	Rate snippets; AirROI 2026 benchmarks
3	No demand engine — marketing sells real estate & owner acquisition, not stays; site tells guests to book on Airbnb	PLAUSIBLE (strong)	IG/site audit; SEO index $\approx$ 5 pages; no ads found
4	Fragmented review equity — proof split across 12+ listings; most units look new (4-13 reviews); Booking 8.7 below the 9.0 wall	PLAUSIBLE	Per-listing review census

Bookings are few because there is little to book $\times$ sold cheap with rigid terms $\times$ nothing pushes demand $\times$ new listings start from zero.

Rate leakage: cheap AND rigid — the worst combination

Benchmark (AirROI 2026, Uluwatu)	Value
Anjuna 2BR lead-in (verified)	\$144 · non-refundable
Market median listing ADR	\$216
Market average ADR	\$267
2-3BR segment ADR	~\$259
Top-quartile ADR	\$313+
Market RevPAR	\$130

- **Undercut from below** — Ayora \$117, Marghe \$136 — with FREE cancellation.
- **Anjuna** — cheap and non-refundable, no visible inclusions.
- **RevPAR ≈ \$122/night** — (if the operator's 85% claim holds) — mere parity with the average listing, with 5-star reviews.
- **1BR baseline** — unverified (\$66 = one low-confidence Agoda snippet).

What the current operation does well — keep it

- **On-ground service is a real asset** — Booking Staff 9.5/10 · named host 'Budi' sends a welcome WhatsApp before arrival · reviews: 'responsive', 'available 24/7' · zero complaints about unreachability.
- **Top-tier ratings** — Airbnb 4.87-5.0 per unit; B1 holds 86 reviews (deeper than almost every new-build rival); Superhost + Guest favorite.
- **Modern stack** — One Guesty backend feeding Airbnb, Booking, Agoda, Trip.com/Ctrip and Marriott Homes & Villas.
- **Rule for any new setup** — Change the commercial wrapper — never the hospitality.

COMPETITION

14 competitors — chosen by the search funnels guests actually use

Funnel (how the guest meets them)	Key rivals	Decision driver vs Anjuna
A · Airbnb 'Uluwatu' grid	Hakuna Matata · Makai · Amaya/NOUR	240 reviews + inclusions in caps · \$388 design flagship · Superhost 1BR
B · Airbnb 'Bingin'	Bingin Castaways · Zylah · Young Villas · Palmera	129-review history · 'brand new luxury' titles · 24h concierge + perks network
C · Booking 'Pecatu' (Anjuna's own grid)	COZ 9.3–9.6 · Marghe \$136 · Villa Yin · KELUK · Ayora \$117	Beach walk-time IN THE NAME · undercut with free cancellation · 9.8 'Exceptional'
D · Google research-first	Uluwatu Surf Villas (TA 204) · Bukit Vista	Owned brand in every roundup · manager-optimized listings

Ayora Villas is the doppelganger to watch: brand-new, architect-designed, multi-unit, own site — and \$117 undercuts everyone (still thin on reviews: 9).

COMPETITION

Where Anjuna stands on every public parameter

Dimension	Anjuna	The pack	Standing
Airbnb rating & depth	4.87-5.0 · B1 86 reviews	Zyloh 4.89/106 · Castaways 4.89/129 · Ayora 4.88/88	TOP CLUSTER — a real moat
Booking.com score	8.7 / 59	Ayora 9.8 · COZ 9.3-9.6 · Young Villas 9.4 · Hakuna 9.1	WEAKEST of the scored set (below the 9.0 wall)
Price & terms	\$144 non-refundable	\$117-500; rivals offer free cancellation	Cheap + rigid — worst combo
Direct booking	Guesty, 1 unit indexed	COZ/NOUR engines · Zyloh/Young/USV own sites	BEHIND the pack
Occupancy	~85% (operator claim)	Not public for anyone; market ~50-62%	UNVERIFIABLE from outside

Guest-appeal scorecard (v0, three evidenced blocks of seven)

Rank	Listing	Positioning /10	Social proof /10	Price & value /10	Total /30
1	Hakuna Matata	7	9	9	25
2	COZ Bali Boutique	9	8	6	23
2	Uluwatu Surf Villas	8	8	7	23
4	Ayora Villas	9	4	9	22
...	...	...	...	...	...
15	ANJUNA (B1 / 2BR)	2	7	4	13

- **Positioning 2/10** — worst in set — unit codes ('B10', '2A5') vs benefit titles.
- **Social proof 7/10** — hidden strength — held back only by the Booking 8.7.
- **Price 4/10** — cheap without a story; rigid terms.
- **Preliminary** — full /100 lands after the browser sweep on fixed dates.

Who comes to Uluwatu — and from where

- **Surfers** — own the identity (breaks since the 1970s).
- **Couples / honeymooners** — own the volume — the most-repeated leisure framing.
- **Luxury travelers** — large and growing (cliff villas, infinity pools).
- **Digital nomads & wellness** — the growth edge — but budget-capped (see GTM).
- **Party / families** — minor for this zone.
- **Origins** — Australia dominant (~25% of arrivals + surf heritage), then India, China, Korea, UK, France, US.
- **Nomads skew** — Brazil / Portugal / Europe.
- **2024→26 shift** — toward Asian markets, a rising Russian cohort — and longer villa stays over hotels (favors Anjuna's product).

The key demand finding: two journeys into Uluwatu

LEISURE TOURISTS — Uluwatu is the FINALE

Canggu/Seminyak (arrival, social) → Ubud (culture) → Uluwatu LAST — the scenic wind-down before the airport.

Modal stay: 2-3 nights, with a strong 'should have done 4-5' tail. They don't flee crowds — they sequence Uluwatu at the end.

NOMADS & SURFERS — the RELOCATION

Nomads genuinely move from Canggu mid-stay ('left Canggu — too crowded') for a slower pace.

Surfers and retreat guests base in Uluwatu start-to-finish, weeks to months. Spend: \$30-65/day mid-band; Uluwatu runs ~15-20% pricier than Canggu.

Implication: be visible 2-6 months out (AU/EU booking windows) — exactly the Inspiration stage where Anjuna currently has zero owned presence.

What they love · what they complain about · the warning

- **Love #1-3** — cliff & sunset views · world-class breaks · beaches and hidden coves — Anjuna's exact product.
- **Then** — quieter-than-Canggu calm · the temple & Kecak · sunset beach clubs (Single Fin, Savaya, Sundays).
- **Cafes they name** — Suka Espresso, Drifter, Cashew Tree, The Loft, Bukit Cafe.
- **Complaint #1** — need a scooter — spread out, not walkable (very high recurrence).
- **Then** — isolated listings 2-6 km from the beach · construction noise & dust (2024-26 boom) · sunset-rush traffic · steep beach stairs · 'boujee' pricing · photos ≠ reality.
- **The warning** — 'Uluwatu is becoming the next Canggu' — its #1 differentiator (calm) is eroding. Anjuna's own construction is part of this story: disclose and manage it, don't hide it.

The booking journey sets the weights for everything

Decision factor (Stage 4: comparison of 5-20 villas)	Weight
Review score & depth	20 / 100
Price & value display	20 / 100
Photos	20 / 100
Location & walk-times	12 / 100
Amenities (wifi, pool, transfer...)	12 / 100
Cancellation policy	8 / 100
Brand / positioning / discoverability	8 / 100

- **Stage 1 (30-180d out)** — Instagram/TikTok/Google — Anjuna absent.
- **Stage 3** — OTAs + Google Hotels + direct site — gaps: Expedia/Vrbo, Traveloka, Google surface.
- **Stage 6** — pre-arrival WhatsApp is the Uluwatu norm — the response layer's home.

Mistakes we caught in our own work — and fixed

What we got wrong	How it was caught	The fix
'~9 of 69 units — CONFIRMED' — false precision from search-only census	User challenge + re-check	Softened to '~10–15 found publicly; exact count needs host profile / Guesty'
'1BR \$66' over-anchored (one low-confidence Agoda snippet; cross-attribution risk)	Adversarial review	Baseline marked unverified; ladder conditioned on Week-0 Guesty pull
Two contradictory rate cards in one strategy (\$200–300 vs \$110–140)	Adversarial review	Single rate card; segment table references it
'Consolidate review equity' would have DESTROYED B1's 86 reviews (IDs are welded)	Revenue review	Rename in place · host-profile halo · Booking room-types
'Direct must be best price' = parity violation; GBP assumed (often ineligible); nomad segment failed its own budget math	Marketing + CFO reviews	Member rates/perks · GBP conditional, GVR-via-Guesty · nomads demoted to organic low-season
No photography, tracking, budgets, KPIs or lag warning in the plan	Both reviews	All added in v2 (30 findings applied)

GO-TO-MARKET · v2 (ADVERSARIALLY REVIEWED)

“Brand-new cliffside pool villas, a short walk from Thomas Beach — the view, the pool and the privacy people come to Uluwatu for, without the Canggu crowds.”

For couples/honeymooners + premium surf travelers first. Travelers' top-3 loves ARE this product — today it's sold as unit codes.

Honesty guardrail: construction & nightlife are audible and documented.
Disclosure ships in Week 1 — before any price move, and inside ad creative.

Week 0 preconditions — the clock starts at signing

- **Brand license** — 'Anjuna Bay' belongs to the developer — written naming rights before any site, ads or handles.
- **Guesty data pull** — real ADR & occupancy per unit. No final price ladder before real rates. (Public 1BR baseline is unverified.)
- **Per-unit inventory audit** — villas are investor-owned: handover ✓ furnished ✓ pondok wisata license ✓ signed owner mandate ✓. Forecast on confirmed-mandate units only.
- **Web-estate clarity** — developer site ≠ operator's Guesty page ≠ the NEW guest site — every task names which it touches.

One rate card — rolled out like a revenue manager, not a switch

Unit	Target ladder
1BR	\$110–140 (after Guesty verify)
2BR	\$190–240 base · \$280+ peak
3BR	\$280–350
\$300+	milestone: Booking >9.0 + construction end

- **Disclosure first** — honest construction/nightlife copy before any increase.
- **Stepped** — +15–20% per 4–6-week cycle, watched on 30-day pickup pace.
- **Season- & unit-gated** — peak dates first; quiet units first; noise-exposed units keep a disclosed 'construction rate'.
- **Grandfather + rollback** — existing bookings honored; pickup –15% vs LY pauses the ladder.
- **Free-cancellation rate** — added alongside non-refundable (rivals win on flexibility).
- **Dynamic pricing** — ~\$20/listing/mo. Vendor benchmarks labelled as claims, not proof.

Projection as sensitivity, not promise

RevPAR / available night (est.)	Occ 55%	Occ 70%	Occ 85%
ADR +20% (\$173)	\$95	\$121	\$147
ADR +40% (\$202)	\$111	\$141	\$172

- **The base (~\$122) rests on the operator's UNVERIFIED 85% claim** — the Guesty pull decides which column is real.
- **If true occupancy is near market (~50%)** — the problem is demand, not rate — sequencing shifts to distribution & brand first.
- **Floor rule** — occupancy below the agreed floor pauses the ladder automatically.

Site, Google, ads — corrected mechanics

- **New direct site (brand-licensed)** — Guesty engine, page per villa, WhatsApp button. Direct economics stated NET: ~5–10% year-one after processing + perk + acquisition — the real prize is the guest database, repeat stays and parity leverage.
- **Rate parity — compliant** — public rates at parity (Booking/Agoda clauses bind in Indonesia); direct wins via closed member rates + perks + repeat codes. Week 1: kill the 'book on Airbnb for best rates' message.
- **Google Business Profile — conditional** — unstaffed vacation rentals are often ineligible; verify staffed reception first. Map path otherwise = Google Vacation Rentals feed via Guesty (engine live + 8 photos + ~3-week approval) — upside, not a pillar.
- **Google Ads — capped & gated** — brand: exact match [anjuna bay villa]/[anjuna bay uluwatu], negatives goa/india/anjunabeats, geo-exclude India, cap \$100–200/mo. Generic 'uluwatu private pool villa' only after tracking is live.
- **Measurement is a hard gate** — GA4 + Guesty purchase event, Meta pixel + CAPI, UTM schema, WhatsApp click tracking — BEFORE any spend. Retargeting from month 3+ (audience ≈ 0 until then).
- **Photography Weeks 1-3** — pro photo + drone + vertical video (~\$1–2k) before renaming, repricing and ads — photos carry 20/100 of the decision.

Three segments — corrected after review

Segment	Countries (paid)	Reach	Price
Couples / honeymoon	AU → UK/DE/FR → US	Meta/IG · 'romantic' OTA copy · honeymoon roundups · direct	Ladder rates (2BR peak-weighted) · free-cancel · direct member rate + perk
Premium surf stay (was 'value surfers')	AU → US/EU · Brazil organic-only	Surf resellers (Perfect Wave-class) · surf schools · IG surf content	FULL ladder + 10-15% weekly discount for 7+ nights (length-of-stay, not a rate cut)
Low-season long-stay (nomads demoted — budget math failed)	organic only · zero paid	nomads.com listing · coworking partners	Monthly rate ONLY in Jan-Mar/Nov troughs · affluent remote couples, not the \$1.5k/mo median · verify fiber first

Why nomads were demoted: their all-in Uluwatu budget is ~\$1,200-1,800/mo — a month at ladder rates exceeds it. Paying to acquire a segment that can't afford the product contradicted the repricing thesis.

What it costs, how it's judged — and the lag warning

Item	Cost	Payback
Renaming · parity · disclosure · cancel-rate · repricing	≈ \$0	weeks — self-funding
Photo/video shoot	\$1-2k	feeds everything
Direct site build	\$2-5k	with member program
Google Ads (brand cap + generic)	\$600-1,700/mo	CPA ≤ \$30-45 displaced commission
Meta/TikTok prospecting	\$1-2k/mo	Q+2 (lag)
Dynamic pricing	~\$20/listing/mo	first repriced peak

KPIs
direct share % · RevPAR index vs market · ADR by unit · 30-day pickup pace · CPA per booked night · Booking 8.7 → 9.0+ · review velocity · engine CVR

RESULTS LAG — SAY IT OUT LOUD
Guests book 60-180 days out: month-1 spend = stays in months 3-7. Days 0-90 are judged on leading indicators; realized revenue reads at days 90-270.

90 days from signing

When	What
Week 0	Preconditions: brand license · Guesty pull · unit audit (mandates/licenses) · web-estate access
Weeks 1-2	Disclosure copy · kill 'Airbnb best rate' message · rename listings in place · photography · TRACKING STACK (hard gate) · align public rates
Weeks 2-4	Reprice phase 1 (quiet units, peak dates) · free-cancel rate · direct-site build · GVR prerequisites
Weeks 4-6	Brand ads (capped/exact/negatives) · member-rate program · GVR submission · first-10-reviews push for new units
Weeks 6-12	Paid social prospecting (AU couples + premium surf) · content SEO · channel expansion (Vrbo/Expedia, Traveloka low-season, TripAdvisor, luxury agencies) · response layer + weekly owner report · reprice phase 2

Due diligence & handover — the top-5 risks

- **Data room requested** — 2-3 yrs financials · occupancy history · SOPs · contracts · asset condition · digital ownership (full checklist in the DD pack, pre-filled with audit findings).
- **Candidate operator** — Fadjri D. Roesman, cSMH — GM-level, ex-Westin/Le Méridien/Mandarin Oriental; his 6 revenue strategies map onto the audit's verified leaks.
- **Target outputs** — business plan & 2026 revenue target · post-takeover ROI estimate.

#	Handover risk
1	OTA listing & review-history transferability (Airbnb account ownership) — negotiate BEFORE termination notice
2	Termination + non-compete in the Balinest management agreement
3	Staff continuity — who employs the praised villa team (keeps Staff 9.5)
4	Guest database export from Guesty
5	Forward bookings & deposits held for post-handover stays

NEXT STEPS

Three moves this month

- 1 · Open the data room** Guesty report + management agreement + per-unit mandate list — turns every 'estimate' in this deck into a number.
- 2 · Sign the operator & brand terms** naming rights, staff continuity, listing-ownership clauses — before any termination notice to the incumbent.
- 3 · Start the self-funding fixes** disclosure copy, renaming in place, parity cleanup, free-cancellation rate, photography — $\approx$ zero cost, effective in weeks, no dependency on the takeover timeline.
