

Positioning, Pricing & Go-To-Market v2 · reviewed

v2 corrected after independent adversarial review (performance-marketing + revenue-management/CFO lenses; 30 findings applied). Unverified numbers are labelled as such.

WEEK 0 — PRECONDITIONS (THE 90-DAY CLOCK STARTS AT SIGNING)

1. **Brand license** — "Anjuna Bay" belongs to the developer; written naming rights before any site/ads/handles.
2. **Guesty data pull** — real ADR & occupancy. Public "1BR \$66" is one low-confidence Agoda snippet; the verified anchor is 2BR \$144. No final ladder before real rates.
3. **Per-unit inventory audit** — villas are sold to investors: handover ✓ furnished ✓ pondok wisata license ✓ owner mandate ✓. Forecast on confirmed-mandate units only.
4. **Web estate clarity** — developer site vs operator Guesty page vs the NEW guest site; every task names which it touches.

POSITIONING

"Brand-new cliffside pool villas, a short walk from Thomas Beach — the view, the private pool and the privacy people come to Uluwatu for, without the Canggu crowds."

For: couples/honeymooners + premium surf travelers, then luxury. **Guardrail:** construction & nightlife are audible and documented — disclosure ships Week 1, before any price move, and inside ad creative. Selling "quiet privacy" over rock-breaker noise manufactures the market's "photos ≠ reality" complaint.

The plan, step by step

- 1 **Own website + Google — corrected mechanics**
 - **New direct site** (brand-licensed): Guesty engine, page per villa, WhatsApp button. Direct economics stated **net:** after ~3% processing + perk + acquisition, year-one advantage ≈ 5–10% — the bigger prize is the **guest database, repeat stays and parity leverage**.
 - **Parity — compliant:** public rates at parity everywhere (Booking/Agoda clauses bind in Indonesia); direct wins via **closed member rates** + perks + repeat codes. Week 1: remove the "book on Airbnb for best rates" message.
 - **Google Business Profile — conditional:** unstaffed vacation rentals are ineligible; verify a staffed reception first. Otherwise the map path is the **Google Vacation Rentals feed via Guesty** (engine live + 8 photos/listing, ~3-week approval) — incremental upside, not a pillar.
 - **Google Ads — capped & gated:** brand = exact match [anjuna bay villa]/[anjuna bay uluwatu], negatives goa/india/anjunabeats/anjunadeep, geo-exclude India, cap \$100–200/mo (anti-conquesting only). Generic "uluwatu private pool villa" launches only after tracking is live.

- 2 **Measurement — hard gate before any spend WAS MISSING**

Weeks 1–2: GA4 + Guesty purchase event · Meta pixel + CAPI · UTM schema · WhatsApp click tracking · attribution sheet. **No ad spend before this exists.** Retargeting staged for month 3+ (audience ≈ zero until then — prospecting carries the plan).

3

Photography — new line item **WAS MISSING**

Weeks 1–3, before renaming/repricing/ads: professional photo + drone + vertical video, honestly framing construction. ~\$1–2k. Photos = 20/100 of the guest decision; every other move consumes these assets.

4

Paid social + SEO + links

- **Meta/TikTok:** AU first → UK/DE/FR → US; Brazil organic-only; Asia = later test cell. Budget \$1–2k/mo test scale; creative from the shoot with honest framing.
- **SEO:** local surface per GBP verification; landmark benefit titles on the new site; content pages months 3–12 (new-domain SEO honestly = 6–12 mo; Ads/GVR bridge).
- **Links:** Linktree hub; consistent naming/photos across OTAs; roundups + surf resellers (Perfect Wave) + partners (Canna, surf schools, wedding planners).

Target segments (corrected)

SEGMENT	COUNTRIES (PAID)	REACH	PRICE
Couples / honeymoon	AU → UK/DE/FR → US	Meta/IG; "romantic" OTA copy; honeymoon roundups; direct	Ladder rates (2BR peak-weighted); free-cancel; direct = member rate + perk
Premium surf stay (was "value surfers")	AU → US/EU; Brazil organic	Surf resellers, surf schools, IG surf content	Full ladder + 10–15% weekly LOS discount (7+ nights). Copy: walk-times to breaks, board storage
Low-season long-stay (nomads demoted — math failed)	organic only, zero paid	nomads.com listing, coworking partners	Monthly rate only in Jan–Mar/Nov troughs ; affluent remote couples, not \$1.5k/mo median; verify fiber first

Nomad demotion: their all-in Uluwatu budget is ~\$1,200–1,800/mo (our research) — a month at ladder rates exceeds it. Paid acquisition of a segment that can't afford the product contradicted the repricing thesis.

Pricing — one rate card, stepped & gated

Verified anchor: 2BR \$144 non-refundable. 1BR baseline unverified (one low-confidence \$66 Agoda snippet). Market (AirROI 2026): avg ADR \$267 · median \$216 · 2–3BR ~\$259 · RevPAR \$130 · top-25% \$313+.

1 BEDROOM

baseline unverified → Guesty pull

\$110–140

2 BEDROOM

today \$144 non-ref

\$190–240 · peak \$280+

3 BEDROOM

\$300+ = milestone (score >9.0 + construction end)

\$280–350

Rollout rules (no 2× jump):

1. **Disclosure first** (Week 1) — honest construction/nightlife copy before any increase.
2. **Stepped:** +15–20% per 4–6-week cycle, watched on 30-day pickup pace.
3. **Season-gated:** peak stay-dates first; shoulder slower. **Unit-gated:** quiet units first; noise-exposed units keep a disclosed "construction rate".
4. **Grandfather** existing bookings; new rates on stay-dates 60+ days out; scripted reservations answer.
5. **Auto-rollback:** pickup pace –15% vs LY pauses the ladder. Free-cancellation rate added alongside non-ref.
6. **Dynamic pricing** (~\$20/listing/mo). Lago Villas "92%/+48%" = **vendor claim, unverified** — same skepticism as Balinest's 85%. Verified support: top-quartile sustains \$313+ here.

REVPAR SENSITIVITY (EST., CONDITIONED ON GUESTY PULL)	OCC 55%	OCC 70%	OCC 85%
ADR +20% (\$173)	\$95	\$121	\$147
ADR +40% (\$202)	\$111	\$141	\$172

Base ~\$122 rests on the operator's unverified 85% claim. If true occupancy is near market (~50%), the problem is demand, not rate — sequencing shifts to distribution/brand first. Occupancy floor pauses the ladder.

Review equity — platform-correct PREVIOUS WORDING WAS DANGEROUS

1. **Never delete or re-create listing IDs** — Airbnb reviews are welded to the listing; "transfer" is impossible. Renaming in place is safe.
 2. Airbnb: consolidate under **one Superhost host profile** (the only transferable equity); new units start at zero — plan a first-10-reviews push.
 3. Booking: add new units as **room types under the existing scored property page** — the one legitimate consolidation.

Budget, KPIs & the lag warning WAS MISSING

ITEM	COST	PAYBACK
Renaming · parity cleanup · disclosure · cancel-rate · repricing	≈ \$0	Weeks — self-funding
Photo/video shoot	\$1–2k one-off	Feeds everything
Direct site build	\$2–5k one-off	With member-rate program
Google Ads (brand cap \$100–200 + generic)	\$600–1,700/mo	CPA target ≤ \$30–45 commission displaced
Meta/TikTok prospecting	\$1,000–2,000/mo	Q+2 (see lag)
Dynamic pricing tool	~\$20/listing/mo	First repriced peak

KPIs: direct share % · RevPAR index vs market · ADR by unit · 30-day pickup pace · CPA per booked night · Booking score 8.7 → 9.0+ · review velocity · engine CVR.

⚠ **Results lag, stated plainly:** target guests book 60–180 days out — month-1 spend produces stays in months 3–7. Days 0–90 are judged on leading indicators (CTR, engine sessions, WhatsApp starts, forward-dated bookings); realized ADR/occupancy reads at days 90–270. An owner not told this will kill the program at exactly the wrong moment.

90 days from signing

Week 0	Preconditions: brand license · Guesty pull · unit audit (mandates/licenses) · web-estate access.
Weeks 1–2	Disclosure copy · remove "Airbnb best rate" message · rename in place · photography · tracking stack (hard gate) · align public rates.
Weeks 2–4	Reprice phase 1 (quiet units, peak dates) · free-cancel rate · direct-site build starts · GVR prerequisites.
Weeks 4–6	Brand Ads (capped/exact/negatives) · member-rate program · GVR submission (~3-wk approval) · first-10-reviews push.
Weeks 6–12	Paid social prospecting (AU couples + premium surf) · content SEO · channel expansion (Vrbo/Expedia, Traveloka low-season, TripAdvisor, luxury agencies) · response layer + weekly owner report · reprice phase 2 per pickup data.

v2 — corrected after two independent adversarial reviews (30 findings; all critical/major applied). Grounded in the audit, competitor metrics, scorecard, booking-journey and voice-of-traveler research; estimates labelled; unverified figures marked. Prepared by Selena Systems, Bali — independent; not affiliated with Anjuna Bay or Balinest Villas.
